FOREWORD

The 2000 Field Health Service Information System (FHSIS) Annual Report is a nationwide compilation of data from health facilities collected through the provincial and regional health offices. The performance of health personnel in undertaking health thrusts is reflected in this public records.

Data on different programs such as Maternal and Child Health, Family Planning, Expanded Program on Immunization, Nutrition, Dental, Communicable, Environmental and vital statistics are presented by province, city and region. These data are intended to be utilized by managers at the national level and local government officials for planning, monitoring and evaluating health activities.

That in the production of this document, the Department of Health gratefully expresses appreciation to people in Local Government Units, local health workers at the barangay, municipal, city and provincial levels; and the staff at the regional health offices. Without their dedication and commitment this annual report would not have been finalized.

HEALTH STATUS

1. Population

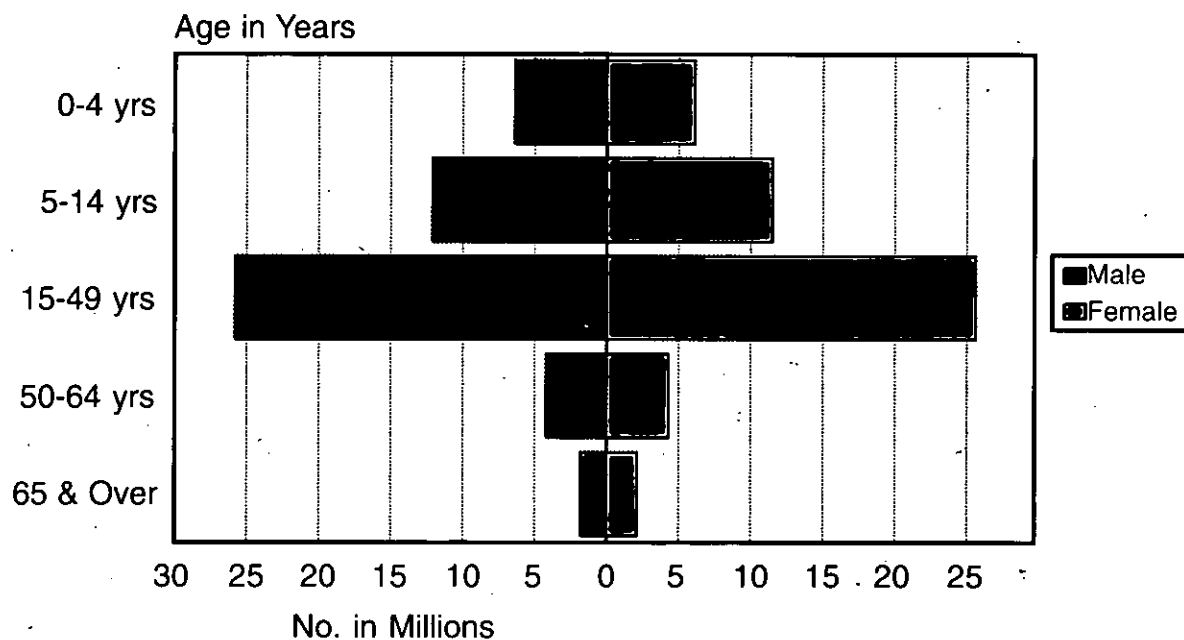

Based on the 1995 NSO Census, Philippines has an estimated year 2000 population of 76,348,114 and a total households of 13,923,267.

The 0-4 years old age group comprises approximately 12.6% of the total population while the 5-14 years old age group accounts to 23.6% of the total population. This makes the Philippines a country of mostly young people. Those aged 65 years and over comprise 4 percent of the population. The population is almost equally divided between sexes with males comprising 50.4 percent of the total population. Women of reproductive age comprise around 25.6 percent of the population.

2. Health Statistics

2.1 Vital Indices

**Figure 2
Trends of Vital Indices,
Philippines 1996-2000**

A total of 1,705,287 births were recorded in 2001. In the same year 308,634 deaths were reported. Of these, 174,107 (56%) were males and 124,233 (44%) were females. Infant deaths totaled to 20,928, neonatal deaths totaled to 229 and there were 1,087 maternal deaths giving us an infant, neonatal and a maternal mortality rate of 12.3, 0.1 and 0.6 respectively.

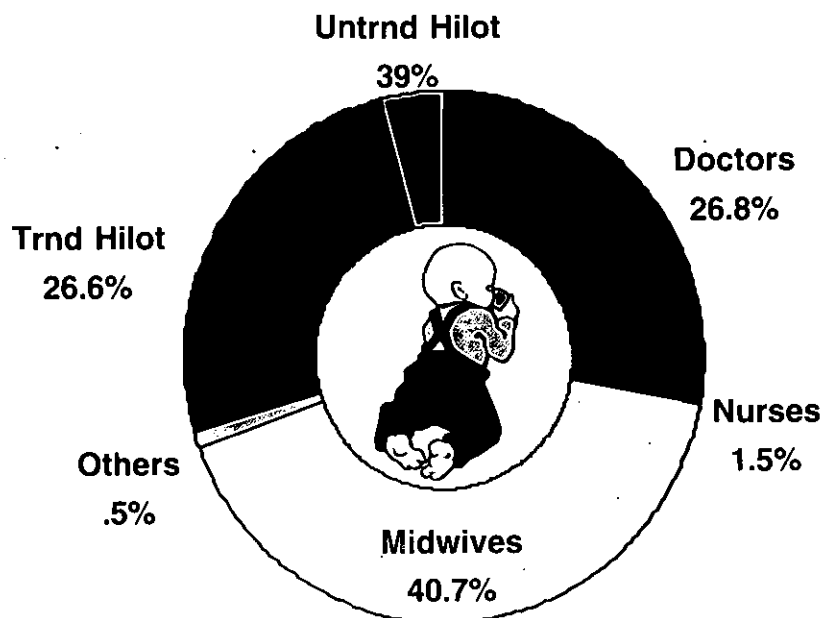

2.2 *Natality*

There were 1,705,287 births registered in year 2000. Of these 875,416 or 51% were males and 829,871 or 49% were females. A total of 1,421,330 or 83.3 percent have a birth weight of 2500 grams and above.

As to place of delivery, mothers prefer to deliver their babies at home with 68.5%, while 27.8% were delivered at hospitals or medical clinics.

As to birth attendance, trained health personnel (doctors, nurses, midwives and trained hilot) assisted about 95.6% of the reported births, 3.9% by untrained hilots and the remaining .5% (8,530) were delivered by persons of unknown delivery training status. (Figure 3)

Figure 2
Births by Attendance
Philippines, 2000

Of the total pregnancies, 62.8% were normal, 26% were risk pregnancies while the rest 11.2% were of undetermined status.

3. Morbidity

Eight of the ten causes of morbidity are infectious or communicable in nature (Figure 4). Furthermore, except for the Hypertension and Measles which cases increased, all of the leading causes of illness have decreased compared to last year cases. (Table 2)

2. HEALTH PROGRAMS

2.1 Maternal Care Program

Of the estimated 2,672,185 pregnant women in year 2000, 64.8% had three or more prenatal visits with at least one visit per trimester to public health facilities. The rest could have gone to the private practitioners, hospitals and traditional birth attendants for maternal care or none at all, thus failing to value these services for varied reasons. Region 2 was noted to have provided greater number of pregnant women with 3 or more prenatal care (76.1%) compared with the other regions.

Pregnant women given 2 or more doses of tetanus toxoid consists of only 62.5%. For postpartum visits, 74% of the targeted population had at least one visit at the public health facilities or at home.

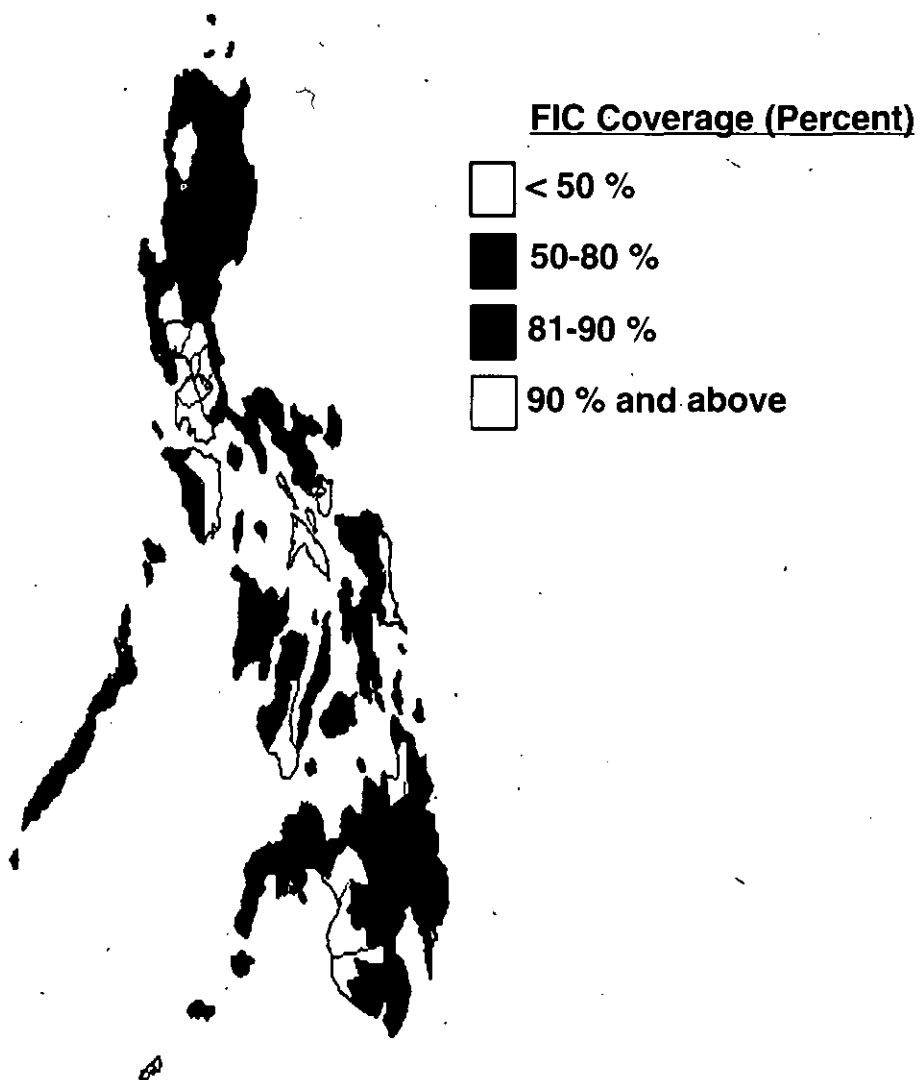

Compared to last year's accomplishment, prenatal coverage has a slight decrease while postnatal coverage has a slight increase. (Figure 5)

2.2 Expanded Program on Immunization

Of the targeted population of 2,290,443 in year 2000, 86.5% were fully immunized children by 9-11 months old. National Capital Region has covered the most number of children less than 1 year old with an accomplishment of 97.7% while Region 6 has covered the least with 78%.

Figure 6
Fully Immunized Child Coverage
By Province, Philippines, 1999-2000

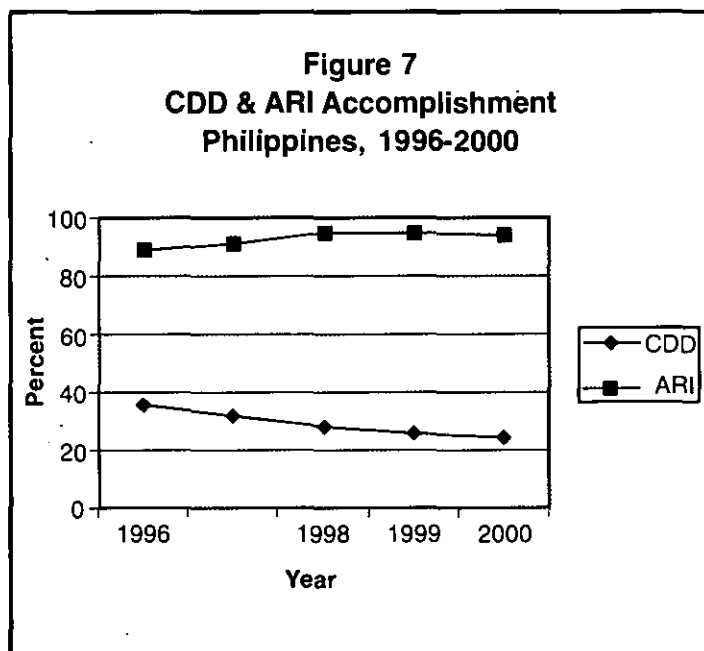

2.3 Control of Diarrheal Diseases (CDD) & Control of Acute Respiratory Infection (CARI)

Diarrheal disease remains to be a major public health concern. The Control of Diarrheal Diseases (CDD) and Control of Acute Respiratory Infection (CARI) caters to the under five-year old children.

There were a decrease of CDD coverage from 1996 to 2000 which again maybe due to inadequate supply of medicines, only 24.1% children were given oresol in 2000.

On the other hand, among those identified to be with pneumonia 93.9% were given antibiotics. For CARI coverage, an increase can be noticed from 1996 to year 2000. (Figure 7)

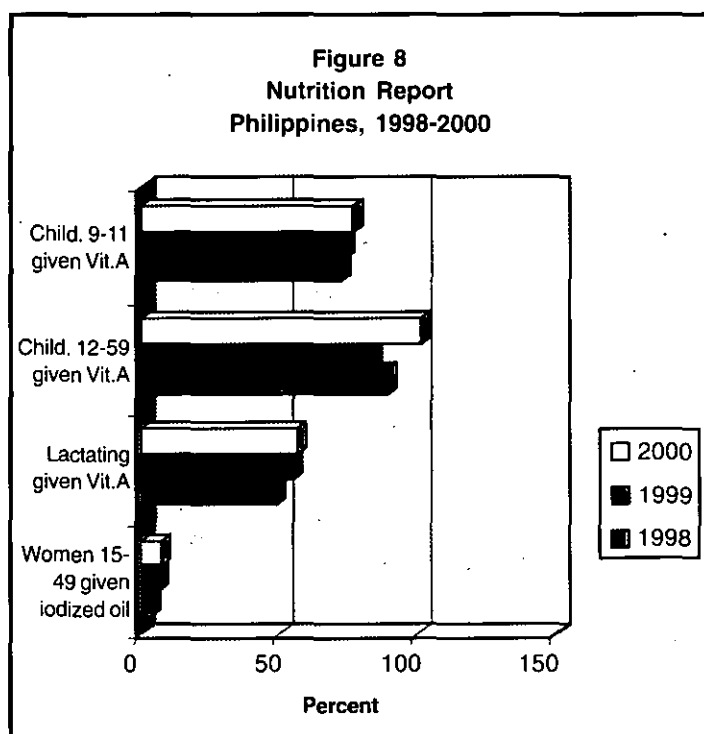

Nutrition Report

Due to devolution, supplements provided in the health centers were limited to Vitamin A and iodized oil capsules.

Vitamin A were provided to 76.9% of children 9 to 11 mos., 101.3% to children 12-59 months and only 57% to lactating mothers.

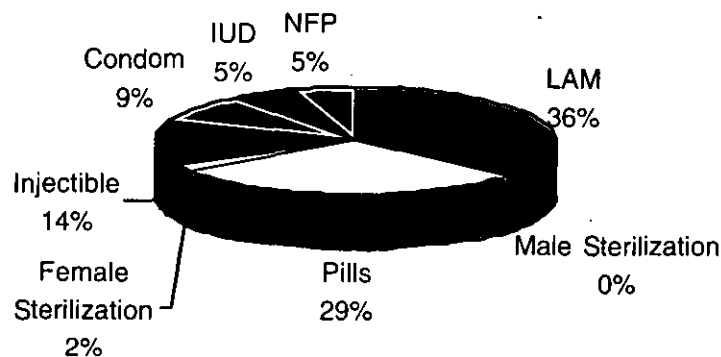

On the other hand, iodized oil capsules were provided to only 7.5% women 15-49 years of age

2.4 Family Planning

In year 2000, field health workers were able to recruit 1,563,239 as new acceptors. Majority preferred LAM (36% or 562,920), followed by pills (29.1% or 454,943), injectable (13.6% or 212,780), Condom (8.8% or 137,740), IUD (5.4% or 84,584), natural family planning method (4.9% or 75,842), female and male sterilization (2.1% or 33,268 and 0.1% of 1,162 respectively).

Figure 9
Family Planning New Acceptors
by method, Philippines, 2000

On the other hand, a total of 3,681,142 current users of family planning are registered for year 2000. The pill still remains the number one choice, injectable has been the next choice and IUD is third choice.

2.5 Dental Health Report

Dental Health is catered to all age groups namely the pre-natal, pre-schoolers, school children and other adults. There were 1,943 dentist (nationally paid or hired by local government) serving the whole population.

Compare to last year's report, there were a slight decrease for pre-schoolers and schoolers given curative treatment. 34.5% was recorded for pre-schoolers while 5.6% for schoolers in year 2000. However, for pregnant and other adults an increase was noted compare to 1999 report, 50.5% pregnant women had permanent filling/extraction, while other adults covered 54.%. (Figure 10)
