FOREWORD

The 2001 Field Health Service Information System (FHSIS) Annual Report provides the nationwide compilation of data/health indicators from health facilities collected through the provincial and regional health offices. The performance of health personnel in undertaking health thrusts is reflected in this public record.

Data on different programs such as Maternal Care and Child Care, Family Planning, Expanded Program on Immunization, Nutrition, Dental, Communicable Diseases, Environmental and vital statistics are presented by province, city and region. Information presented can be utilized by national and local government officials and managers for policy-making, planning, monitoring and evaluating health activities.

The Department of Health expresses its grateful appreciation to all the health workers at the different levels of government units (regional, provincial, city, municipal and barangay) in producing this document. Without their dedication and commitment, this annual report would not have been finalized.

I. HEALTH STATUS

1.1 Population

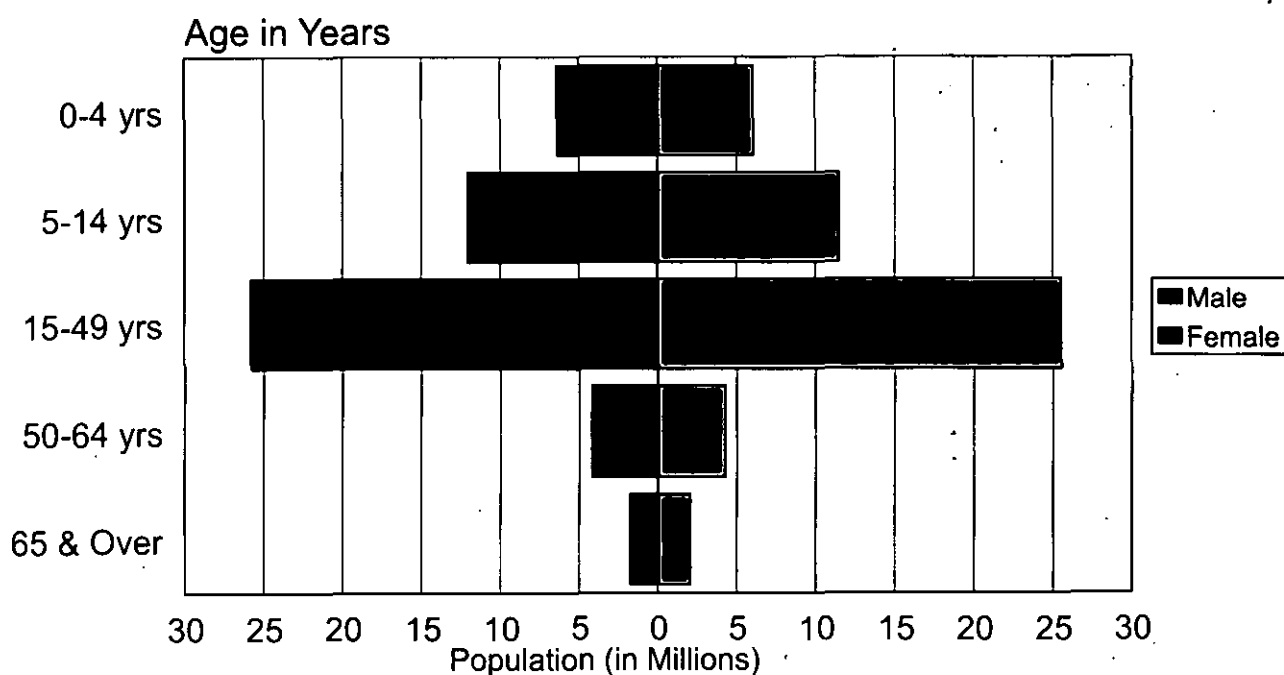

Based on the 1995 NSO Census, the 2001 population is estimated at 77,925,894. Of these, 50.4% were male and 49.6% were female.

Of the total population, majority (60%) belonged to the 15-64 years age-group, followed by less than 15 years (36%), while 4% were elderly (65 years and over).

1.2 Health Statistics

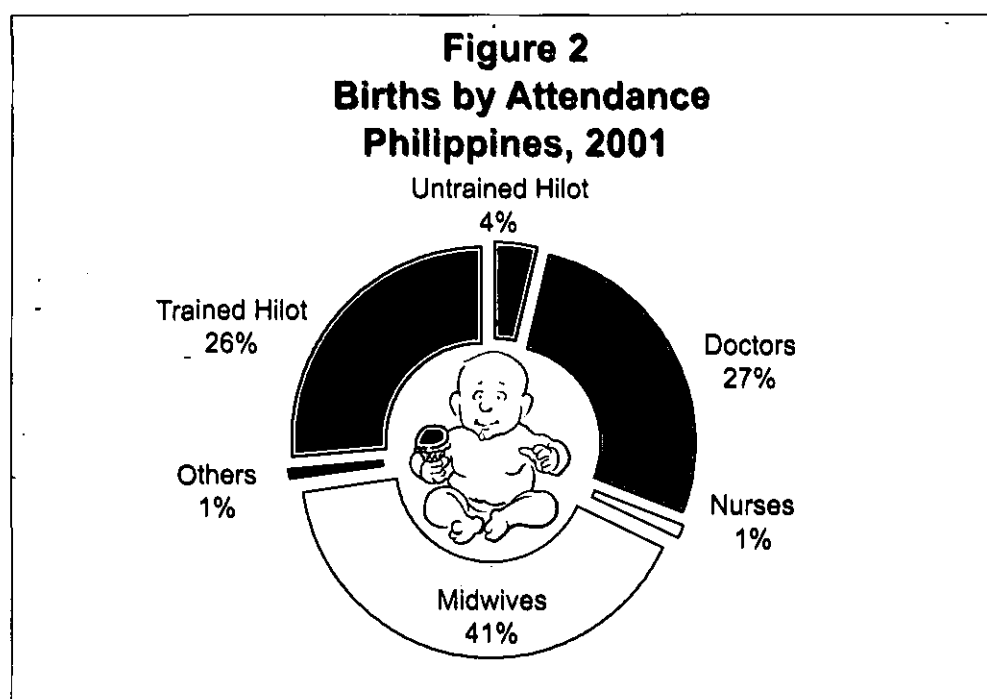

1.2.1 Natality

A total of 1,684,093 livebirths were registered in 2001. Of these total livebirths, 859,842 were males while 824,251 were females.

As to place of delivery, 1,150,412 (68%) were delivered at home, while 460,325 (27%) were delivered in hospitals. Of the total deliveries, 1,162,344 (69%) were attended by medical professionals (doctors, nurses, and midwives) while 31% were handled by trained hilots and other non-medical persons.

There were 1,449,892 (86%) babies born with normal birthweight (2500 grams and above).

Of the total pregnancies, majority (64.3%) were normal, 24.8% were risk pregnancies while the rest (11.2%) were of undetermined status.

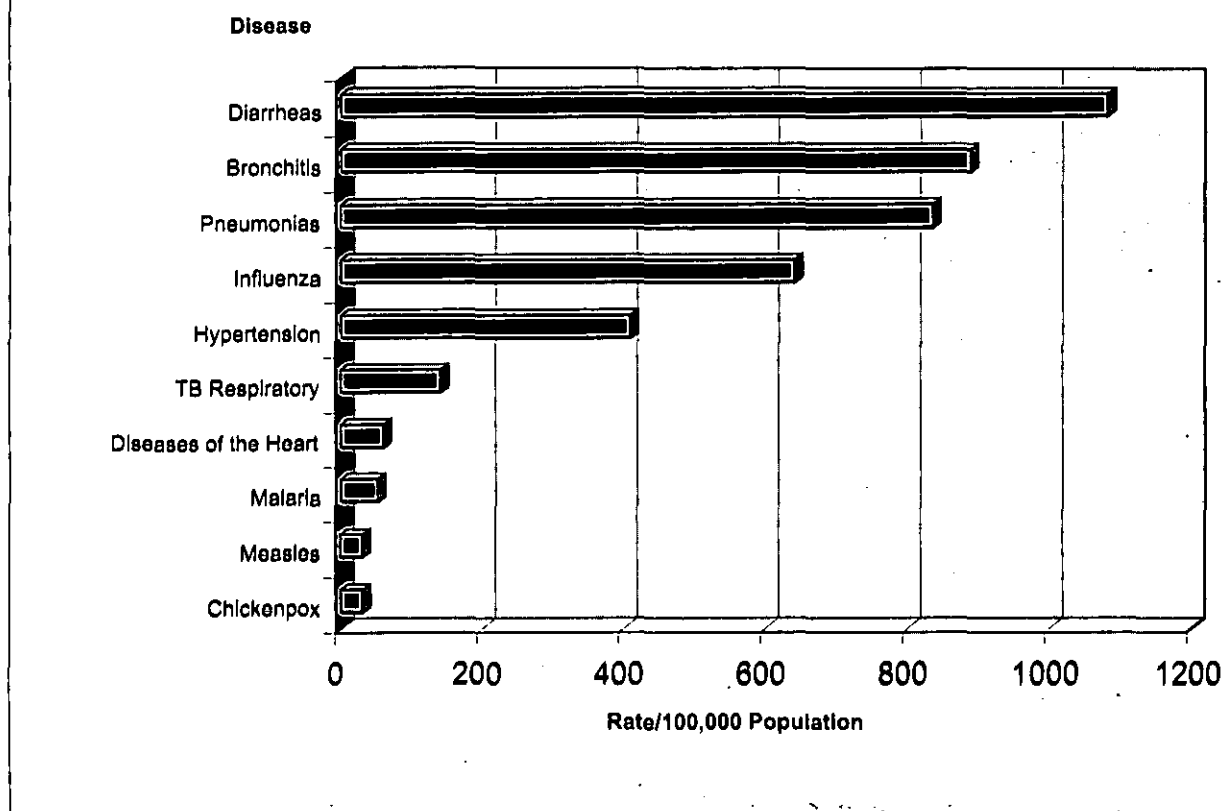

1.2.2 Morbidity

Majority of the leading causes of morbidity were still communicable diseases such as pneumonia, diarrhea, bronchitis, tuberculosis, influenza, measles, chickenpox and malaria. Except for pneumonia and measles, all of the above communicable diseases showed a marginal decrease compared to last year's data. Among the non-communicable diseases, hypertension and diseases of the heart were included in the leading causes of morbidity.

1.2.3 Mortality

In 2001, there were 323,616 registered deaths. Of these, 58% were male and 42% were female. The number of deaths increased by 4.8% compared to last year (308,634). There were 18,940 infant deaths, 479 neonatal deaths and 1,086 maternal deaths registered, giving us an infant, neonatal and a maternal mortality rate of 11.2, 0.3 and 0.6, respectively.

1.2.4 Health Facilities & Manpower

There were 15,107 barangay health stations nationwide serving the entire population.

Health workers in Local Government Units are manned by the following key personnel: 2,957 physicians, 1,958 dentists, 4,819 nurses, 16,612 midwives, 291 nutritionist, 3,245 engineers/sanitary inspectors, 1,456 medical technologist, 1,052 dental aides, and 2,936 non-technical staff. To assist these health personnel are 187,376 barangay health workers and 51,114 birth attendants.

2 HEALTH PROGRAMS

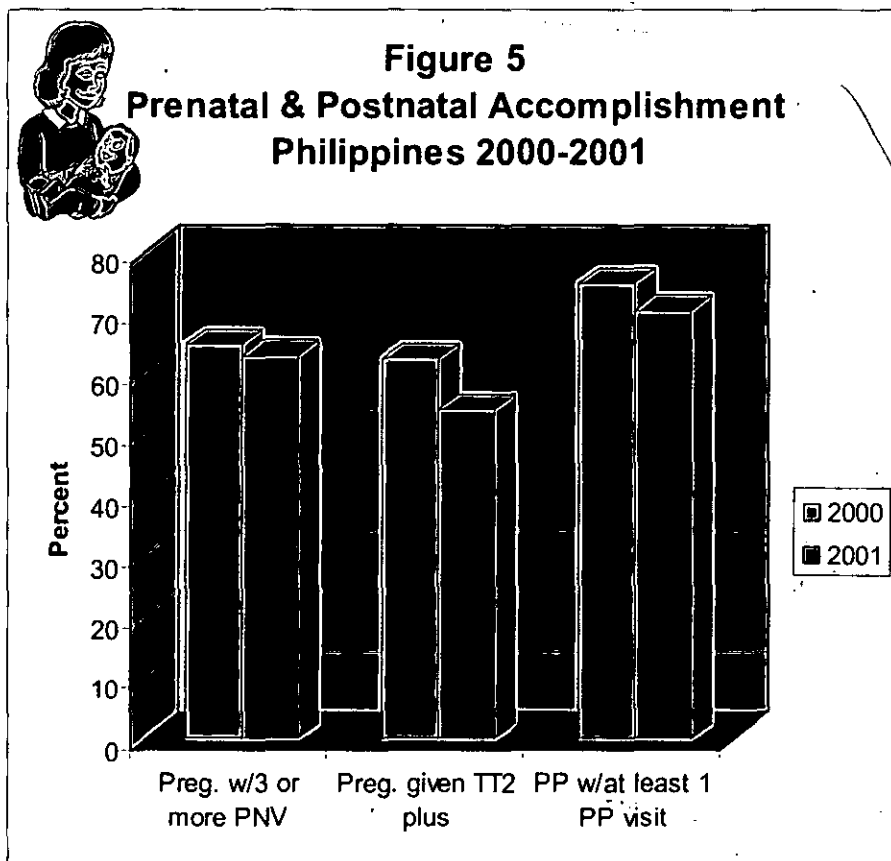

2.1 Maternal Care Program

Protecting the health of the mother and child is the primary concern of this program. It aims to provide quality maternal care to all eligibles. Concerted efforts of various health workers had been made to maintain/improve the well-being of this vulnerable group.

Almost sixty three percent of pregnant women had three or more prenatal visits (with at least one visit per trimester) to public health facilities. Among the regions, Region 1 had the highest (77%) number of pregnant women with 3 or more prenatal visits.

Tetanus toxoid (TT2+) immunization coverage declined from 62.5% in 2000 to 54.2% in 2001.

The number of women receiving at least one post partum visit either at home or in a clinic reached 70.2%, with Region 7 having served the most, (80.6%) of its target.

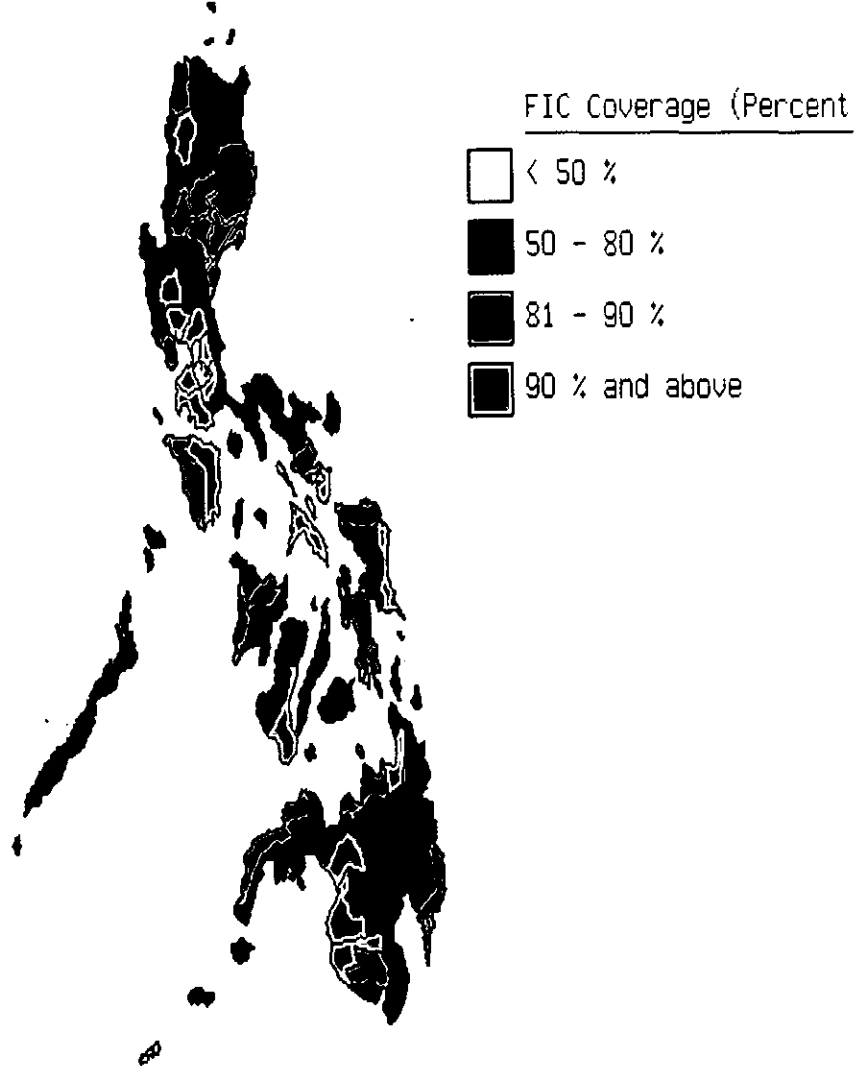

A slight decrease in prenatal and postnatal accomplishment can be noted compared to last year's data . (Figure 5)

2.2 Expanded Program on Immunization

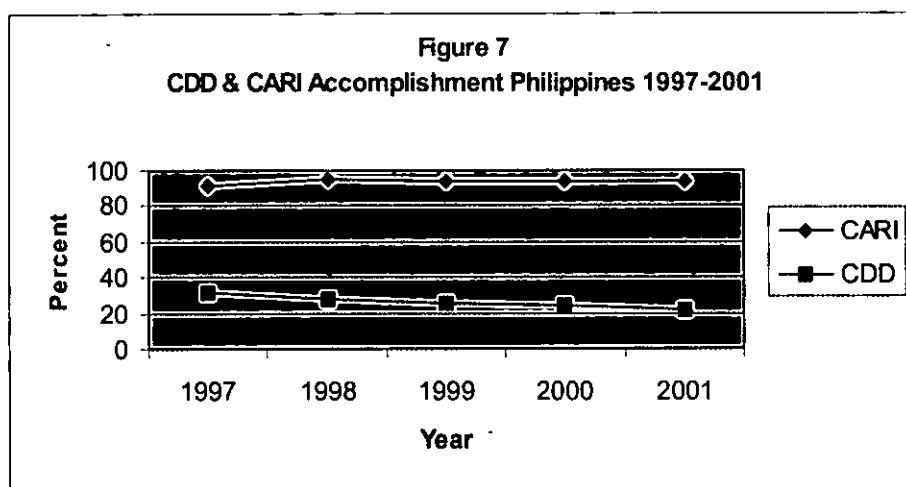

Expanded Program on Immunization (EPI) data for 2000 and 2001 showed slight differences. For Fully Immunized Children (FIC), the 2001 coverage is at 81.7% compared to 86.5% in 2000. This represents a total of 1,910,561 out of 2,337,777 eligible children immunized before reaching one year of age. Region 4 has covered the most number of children less than 1 year old with an accomplishment of 91.4%, while Region 8 71.8% immunization coverage.

As per individual antigen, National Capital Region registered the most number of children given BCG, Measles, DPT3, and OPV3 while Region 4 had the most number of children given Hepatitis B3 vaccine.

Figure 6

By Province, Philippines, 2000

2.3 Control of Diarrheal Diseases (CDD) & Control of Acute Respiratory Infection (CARI)

Diarrheal diseases always pose a threat to people's lives. In 2001, it is the top leading cause of morbidity for all ages with a rate of 1081.5/100,000 population. The total number of diarrheal cases among 0-4 years old decreased from 24.1% in 2000 to 22.4% this year.

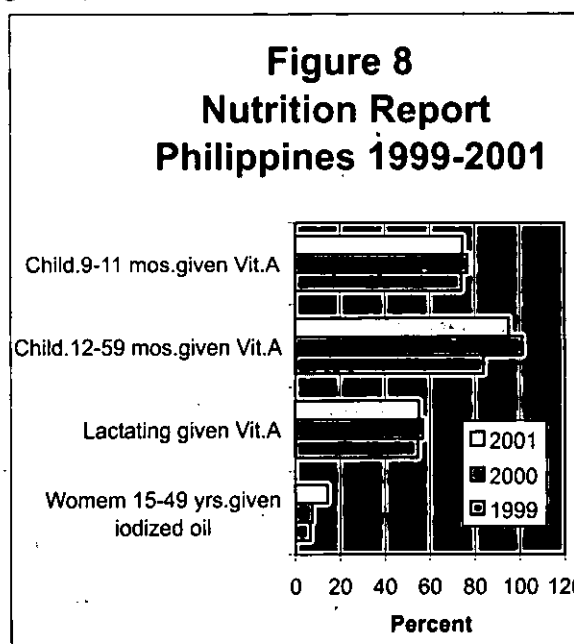

There was a decrease of CDD accomplishment from 1997 to 2001, which can be attributed to inadequate supply of medicines.

On the other hand, an increase from 93.9% to 94.2% was seen among identified pneumonia cases given antibiotics. For CARI coverage, an increase can be noticed from 1997 to 2001 (Figure 7).

2.4. Nutrition Report

Vitamin A were provided to 74.6% of children 9 to 11 mos., 95.1% to children 12-59 months & only 55.3% to lactating mothers. It will be noted that there was a decrease in the provision of Vit. A compared to previous years.

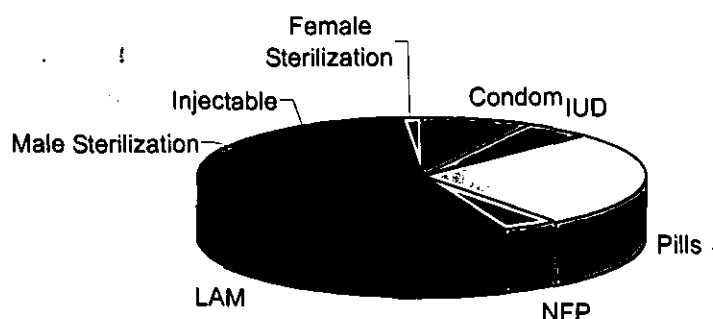

On the other hand, an increase in the number of iodized oil coverage was noted. There was 14.3% of women aged 15-49 years provided with iodized oil capsules.

2.5 Family Planning

A total of 1,391,234 new acceptors and 4,230,359 current users of Family Planning method were registered in 2001. Lactational Amenorrhea Method (LAM) continues to be the most accepted method by those newly-enrolled to the program. For current users, Pills is still the most widely used method. Male Sterilization was the least favored method.

2.6 Dental Health Report

Dental Health Program caters all age groups namely the pre-natal, pre-schoolers, school children and other adults. There were 1,952 dentists (nationally paid or hired by local government) serving the whole population.

This year, there was a slight decrease of those given curative treatment (temporary and/or permanent filling and extraction of temporary teeth) compared to that of last year: from 34.5% to 29.1% among pre-schoolers, 5.6% to 4.9% among schoolers, 50.5% to 42.8% among pregnant women and from 54% to 52.9% among other adults.

Figure 10
Curative Dental Treatment
Philippines 2000 vs. 2001

2.7 National Tuberculosis Program

Tuberculosis (TB) is one of the major public health problems in the country. It is the sixth leading cause of morbidity with a rate of 141.4/100,000 population.

Data revealed that new sputum positive initiated treatment by the local health unit is 81.0 per 100,000 population.

There was a decrease of total TB cases compared to last year's report (169.9 per 100,000 population). For year 2001, total TB cases registered was 153.7 per 100,000 population which consists of new sputum positive initiated treatment, old sputum positive being re-treated and x-ray positive initiated treatment.

2.9 Environmental Health Sanitation

For year 2001, there were 14,399,035 households in the entire Philippines. Seventy one percent of the total households or 10,262,572 have sanitary toilets while 79% or around 11 million households have access to safe water supply. Region 1 had the highest percentage of access to safe water while Autonomous Region in Muslim Mindanao had the lowest with 54.2%. (Figure 11)
